PROFESSIONAL SUMMARY

Results-driven **IT Operations Engineer** and Full-Stack Developer with 3+ years of experience specializing in Linux server administration, cloud infrastructure (GCP), and operational automation. Proven track record in architecting scalable terminal server environments, maintaining high-availability (99.7% uptime), and developing responsive full-stack applications—such as **FinTrack**, a personal finance tracker, and a digitalized **Thesis Monitoring System** that streamlined academic workflows. Dedicated to bridging the gap between robust software development and highly secure, automated IT infrastructure.

KEY PROJECTS

FinTrack (Personal Finance Tracker)

React, Node.js, Express, Tailwind CSS, PostgreSQL

- Developed a responsive personal finance management application with interactive dashboards to track expenses, manage budgets, and analyze monthly transaction trends.
- **Repository:** github.com/reyfuu/fintrack

Thesis Monitoring System (UKDC)

Laravel 12, Filament PHP, MySQL

- Digitalized student advisory and tracking workflows using Laravel 12 and Filament PHP, reducing document submission delays by 30% through automated notification systems.
- **Repository:** github.com/reyfuu/new-monitoring

E-Library Management System

PHP, MySQL, Web

- Developed a digital library platform for SMK Santo Louis using PHP and MySQL, automating book circulation and fine calculations.
- **Repository:** github.com/reyfuu/e-library

Immich Enterprise Deployment

Docker, Linux, Infrastructure

- Deployed a self-hosted media management system using Docker for 100+ internal users to ensure data sovereignty and secure collaboration.

Learning Platform

Next.js, Tailwind CSS, React, Web Development

- Developed a highly interactive web-based learning platform using Next.js, Tailwind CSS, and React, providing seamless course delivery for 50+ active students.
- Optimized page rendering speeds and asset delivery to improve overall application load performance by 25%.
- **Repository:** github.com/reyfuu/learning-platform

AI Agent Integration (Antigravity Platform)

AI, Python, LLMs, Antigravity CLI, agent.md, skill.md

- Developed and structured autonomous AI Agents utilizing the **Antigravity CLI**, configuring `agent.md` (agent profiles) and `skill.md` (functional definitions) to streamline technical workflows and automated code generation.

WORK EXPERIENCE

PT Surya Mitra Tirta Kencana | Freelance IT Operations Engineer | July 2022 - December 2025

- Architected and deployed LTSP infrastructure for 30+ users across 2 office locations, reducing hardware procurement and maintenance costs by 40%.
- Managed Immich self-hosted photo management platform using Docker to ensure data sovereignty and established robust automated backup protocols.
- Integrated Qwen and Gemini AI models to automate system documentation and code refactoring workflows, increasing operational development velocity by 30%.
- Maintained 99.7% system availability through proactive monitoring, incident response protocols, and standardized deployment scripts.

EDUCATION & CERTIFICATIONS

Universitas Katolik Darma Cendika | Bachelor of Computer Science (S.Kom) | June 2019 - 2023

Certifications: Bangkit Academy Cloud Computing Specialization, Software Engineering Fundamentals (Dicoding).

TECHNICAL SKILLS

IT Operations & DevOps: Linux (Fedora/Ubuntu/Debian), Docker, Kubernetes (GKE), Google Cloud Platform (GCP), Networking (Mikrotik, Cisco Packet Tracer).

Development: React, Vue.js, Next.js, Node.js (Express), JavaScript, PHP (Laravel 12), Django, Python, Tailwind CSS, Golang, C++, Java.

AI & Automation: AI Agents, Claude Code, Gemini, Antigravity CLI, Scikit-learn, Data Analysis.

Version Control & Collaboration: Git, GitHub, GitLab, Postman, DBeaver, Google Workspace, Figma, Obsidian, Trello.

Soft Skills: Leadership, Technical Documentation, Problem Solving, Analytical Thinking.

Languages: English (Professional Working Proficiency), Indonesian (Native).
